

Outsourced IT Solutions

Professional Computer Services IT Systems Sales, Support & Integration Networking & Internet Security

The computer systems, servers, and networks you use everyday are crucial to the operation of your business. But, your small-to-medium size business probably can't afford a full-time IT employee.

When there is a problem, a critical system is down, or you need new systems to expand your capabilities, to whom do you turn?

You turn to DigiDr to support your systems to ensure that your technology infrastructure is helping you make money — not causing downtime and lost productivity.

DigiDr helps you maximize the efficiency of your systems while keeping your costs consistent with one retainer-based fee covering all of your support labor costs.

We have a no-nonsense, practical approach to IT systems sales, support, and integration. We build security into everything we do because your critical systems and private client data must not be compromised. Not to mention protection from hackers, viruses, spyware, and other annoying, malicious attacks that drain productivity and put your data at risk.

Remote virtual support enables us to continuously monitor and maintain your systems. On-site response and preventive maintenance visits help us provide you with maximum uptime and return on your technology investment.

Warranties protect your hardware—support services protect your business.

Contact us today to find out how your business can benefit from Outsourced IT Solutions.*
